

# MORPHISEC SHIELD

## Proactive Threat Prevention

The rise of fileless attacks, advanced ransomware, zero days, and evasive malware have made protecting organizations from cyberattacks a more complex problem than ever. Morphisec Shield is built to halt these advanced cyber threats in their tracks, securing the organization and empowering security teams.

### Protect Against the Unknown With Moving Target Defense

The cybersecurity arms race has long favored attackers. Application memory is a static target that adversaries can study at their leisure to determine the best avenue for attack. Defenders, on the other hand, must contend with shifting attack vectors and tactics. This results in security teams playing catch up as adversaries find new ways to breach the organization, including fileless attacks, zero days, evasive malware, and in-memory exploits.

These types of attacks are explicitly designed to bypass even the most sophisticated NGAV and EDR tools. They obscure their activities and skirt past detection systems to wreak havoc on the enterprise.

This is why Morphisec is different.

Morphisec Shield, based on moving target defense technology, deterministically blocks the most damaging cyberattacks on the market. No signature database or updates required.

### Morphisec Shield Protects the Entire Organization

Endpoints

Servers

Virtual Desktops

Cloud Workloads

### Against the Most Damaging Cyberthreats ...

Advanced Ransomware

Evasive Malware

In-Memory Exploits

Zero Days

Fileless Attacks

### Earliest Stage, Proactive Threat Prevention

Morphisec Shield, based on Moving Target Defense, is an offensive prevention technology that shifts the balance of power to defenders. Its polymorphic engine continuously and randomly morphs memory resources, changing structures from a static target to a dynamic one that frustrates attacks. Threats are immediately stopped and deterministically revealed as malicious. Rich forensic information is captured for teams who need it.

### KEY BENEFITS

#### STOP ADVANCED THREATS AND ZERO DAYS

Prevents zero-days and advanced attacks, without requiring any prior knowledge of threat form, type or behavior.

#### VIRTUALLY PATCH VULNERABILITIES

Keeps infrastructure protected from vulnerability exploits when patches are not yet available or deployed.

#### PROTECT ALL IT INFRASTRUCTURE

The same technology secures servers, endpoints, virtual desktops, and cloud workloads from cyberattacks.

#### INTEGRATES WITH LEADING ANTIVIRUS SOLUTIONS

Morphisec Shield works with most AV vendors for added security against advanced threats.

#### SET AND FORGET

Rapid, easy rollout with no system conflicts and zero maintenance. No databases, signatures or rules to configure/update, no logs or alerts to analyze.

#### NO SYSTEM IMPACT

Lightweight, stateless agent with minimal footprint, no run-time components and no performance impact.

#### CUT SECURITY OPERATIONAL COSTS

Does not generate false alerts, no need to investigate, analyze or remediate. Blocks attacks pre-breach, before they can do any damage.

## Security that Makes IT Happy

Cut your security risk without cutting into business operations or productivity. Morphisec is built from the ground up to align business and security needs.

Morphisec Shield is a single agent solution with no run-time components and zero performance impact. It runs autonomously so your endpoints are always protected, even when not connected to your company's network. An on-premises or cloud-based management console provides end-to-end visibility into organization-wide threats and effortless control over settings and functionality.

- Prevent threats without continuous monitoring or generating reams of data.
- Reduce IT complexity and protect business continuity.
- Protect in-between patching cycles; employ as a Windows 7 compensating control.
- Gain visibility into all endpoint attacks including Microsoft Defender AV events.
- View full attack timeline and correlate events to make smarter, faster decisions.
- Easily deploy across virtual, physical or hybrid IT environments.

## How It Works

Morphisec works by morphing the application memory. This changes the memory structure of your applications and turns it from a known entity into an unknown landscape.

By doing this, Morphisec protects your applications from zero days, fileless attacks, in-memory exploits, and evasive malware. We make your application memory secure, and allow you to get back to business.

## Secure Everything

Morphisec Shield secures your endpoints, Windows and Linux servers, cloud workloads, and virtual desktop infrastructure platforms such as VMware Horizon View and Citrix.

## About Morphisec

Morphisec delivers an entirely new level of innovation with Morphisec Shield, its proactive threat prevention platform powered by Moving Target Defense – placing defenders in a prevent-first posture against the most advanced threats to the enterprise, including APTs, zero-days, ransomware, evasive fileless attacks and web-borne exploits. Morphisec provides a crucial, small-footprint memory-defense layer that easily deploys into a company's existing security infrastructure to form a simple, highly effective, cost-efficient prevention stack that is truly disruptive to today's existing cybersecurity model.
