

PREVENTION-FIRST SECURITY FOR UNRIVALED THREAT PROTECTION

Organizations today face major security challenges. Attackers continue to become more sophisticated over time, changing their tactics to outsmart predictable, static defense mechanisms. In fact, it is estimated that by 2031, ransomware is expected to attack a business, consumer, or device every 2 seconds.* That's a 500% increase from today. At this rate, organizations don't have the luxury of time when it comes to threat protection. Now more than ever, businesses need to take a proactive, dynamic stance.

STOP RANSOMWARE AND UNKNOWN ATTACKS BEFORE THEY HAPPEN WITH MORPHISEC AND MICROSOFT DEFENDER FOR ENDPOINT

■ Prevent attacks and advanced persistent threats

Proactively block evasive threats without requiring a detection system. With the Morphisec Moving Target Defense solution, automatically prevent ransomware and other advanced attacks.

■ Gain visibility and control

Leverage a single console for enterprise-level visibility and control over native window security controls like Microsoft Defender for Endpoint. View full attack timelines and correlate events to make smarter, faster decisions.

■ Optimize your resources

Conserve your IT team's time and resources by reducing false positives and eliminating alert fatigue. Morphisec offers a single-agent, prevention-focused solution that does not require an organization to leverage other services or remediation.

MORPHISEC AND MICROSOFT

Morphisec is complementary to Microsoft solutions and operates smoothly with Microsoft Defender for Endpoint and Microsoft Defender Antivirus. Morphisec is recognized as a member of the Microsoft Intelligent Security Association, partnering with Microsoft to deliver enterprise-grade security solutions for enhanced protection.

PREVENTION-FIRST SECURITY FOR UNRIVALED THREAT PROTECTION (CONTINUED)

STOP ADVANCED ATTACKS BEFORE THEY BEGIN

- Seamlessly integrate Morphisec's powerful MTD technology with Microsoft Defender for Endpoint.
- Create a dynamic attack surface that threat actors can't penetrate, causing them to abort attacks.
- Enhance compliance and executive reporting by visualizing attacks Morphisec blocks in the Defender for Endpoint security console.
- Prioritize alerts in the Active Alerts list and determine machine risk scores with Morphisec threat analytics.
- Safely use Microsoft Defender standard alert settings to lower IT and analyst costs.

WHY MORPHISEC?

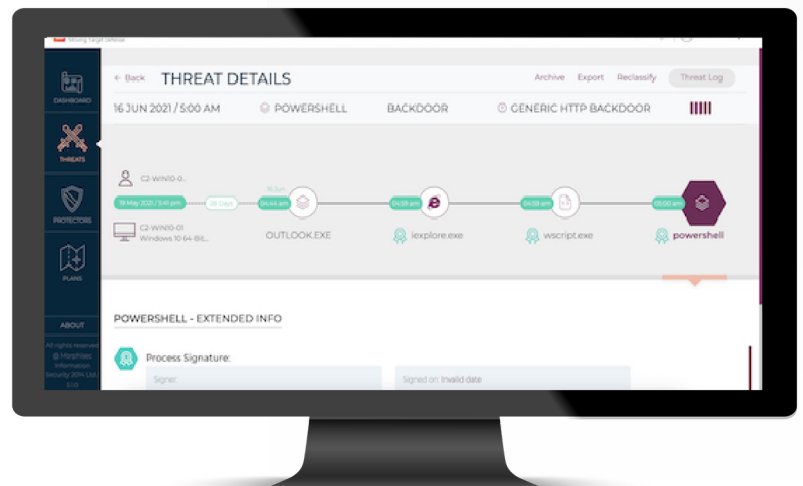

- 8.5 million endpoints and servers protected by Morphisec technology.
- 5,000+ protected enterprises.
- Up to 30,000 ransomware, malware, and fileless attacks prevented per day.*
